

Materials for stocking your classroom

Technology materials:

- Computer, overhead projector, and smart board: if the school I get hired at doesn't already have these in every classroom, I'll be working on grant applications, donations, etc to make sure I get these
- Accessories for the TI graphing calculators: if I can't get these through the school, I will definitely buy some of my own. One of the things I'm looking forward to by being out of IT as a profession is that I will actually learn to like computers again, and spend time using them as tools and entertainment devices.
- Web site: whether provided by the school system, or done on my own, I will set up a web site for my class. In addition to being a great communication tool, I'll use it as a place to organize and access other technology resources that I find.

Other materials:

- Although most of the literature on individual whiteboards is oriented to elementary or middle school use, I plan on having a set of them in my high school classroom, as I can see many potential uses for them there, as well.
