

How Many Fish Are In My Pond? – Additional Questions and Activity

As a group, determine what your “final answer” is on how many fish are in the pond?

Do you feel this is a “good” estimate?

Build an Excel spreadsheet that shows how you came to your conclusions. Build it so that the sheet can be displayed on the ActivBoard.

Now that you know how many fish were in the pond, consider:

- which simulation method produced the more accurate results?

- what effect did the amount of fishing time have on the results?

Add to your Excel spreadsheet any calculations that you used to support the conclusions above.
